About Tradedoubler
Established in 1999 in Stockholm by Felix Hagnö and Martin Lorentzon, the co-founder of Spotify, Tradedoubler swiftly ascended to become Europe's no. 1 Affiliate Marketing network, listed on the Stockholm Stock Exchange since 2005. Presently, we extend our proprietary Partner Marketing and Tech Solutions across +90 countries, backed by a dedicated team exceeding 350 Tradedoublers. While operating on a global scale, our ethos remains deeply rooted in local authenticity and a commitment to people-centric values.

1 Overview

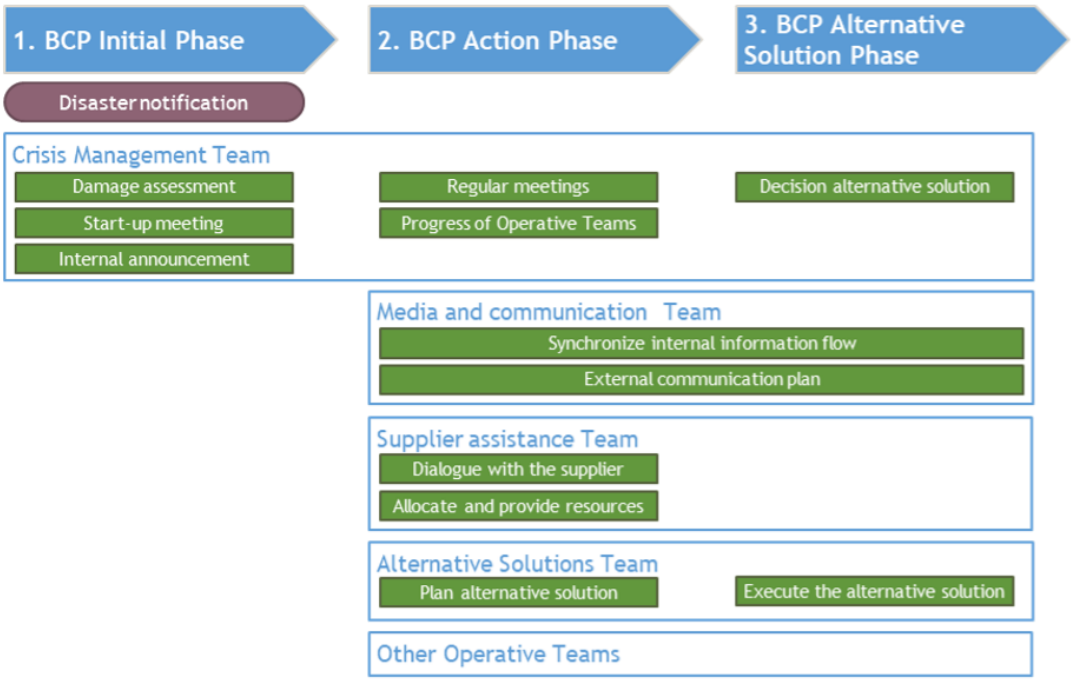
Tradedoubler has a commitment to its advertisers and owners to provide reliable and efficient services. To fulfil this commitment, Tradedoubler has established a Business Continuity Plan (BCP). The BCP contains a series of prepared actions to have at hand in a major crisis for Tradedoubler business. These actions are geared toward achieving continuity of business-critical functions through organisational preparations, which includes IT-operations. Therefore, business-critical IT service suppliers are also in scope for the BCP at Tradedoubler.

The BCP aims to start planning for an alternative solution to ensure continuity for Tradedoubler in case of failure of the supplier BCP. Since crisis situations at IT service suppliers can constitute a risk for Tradedoubler, Tradedoubler's BCP also aims to aid suppliers in their BCP work.

2 BCP Structure

In the event of disaster affecting one of Tradedoubler's IT service providers, the BCP is activated. The focus for the Tradedoubler BCP is prioritisation, communication and organization during a disaster. The BCP is divided into three phases, each phase has defined action points and decisions to be made.

Figure 1. Overview of the steps and activities in the Business Continuity Plan



3 BCP Initial Phase

Tradedoubler's BCP is triggered by a disaster notification from a supplier. If the scenario described in the notification fulfils the criteria for a crisis the BCP is triggered, and the Crisis Management Team are gathered. Their first tasks are to establish contact with the supplier or relevant internal department. An independent damage assessment is performed to assess which services are affected and the extent of the damage. It provides a basis for decisions regarding prioritisations and allocation of resources.

The Crisis Management Team's responsibility is to coordinate actions and make decisions throughout the business continuity management process. All meetings and decisions during crisis management are documented.

4 BCP Action Phase

In the Action Phase, the two main areas of focus are to aid the supplier as much as possible, and to continuously assess and handle the crisis accordingly. The Crisis Management Team holds regular meetings where the situation and need for Operative Teams are evaluated, decisions on prioritisations are made, and resources are allocated. The Crisis Management Team also make decisions on whether to execute alternative solutions or not.

During the Action Phase Operative Teams are created. Examples of Operative Teams and tasks are:

- The Media and Communication Team aims at synchronizing and planning information to different target groups internally and externally.
- The Supplier Assistance Team supports the supplier in their BCP work with any needed resources.
- The Alternative Solution Team investigates possibilities of a solution to the disaster and plans the execution of an alternative solution.

5 BCP Alternative Solution Phase

If the supplier fails to mitigate the disaster, the Crisis Management Team may take the decision to execute an alternative solution. If so, the BCP enters the Alternative Solution Phase. The decision to execute an alternative solution is based on dialogues with the supplier, input from the Operative Teams, and assessments on the impact on Tradedoubler's business.
