Information Classification Guidelines

Approved by CEO
12 March 2026

1 Information Classification Guidelines

All stored information within Tradedoubler must be classified. The objective with information classification is to estimate the need for information protection. The need for such protection will judge how information is handled in telephone, e-mail, mail, fax, USB, PC at business trips or other use of the PC outside Tradedoubler, printouts and maculation.

Information classification is also important to protect the interest of our clients, owners/shareholders, local business units, employees, business partners or suppliers.

Note: Personal data shall always be classified and handled as "confidential". When managing information that can contain personal data, the following policies shall be considered in addition:

- External Privacy Policy (when managing client and user's personal data)
- Accounting & Personal Data Policy (when handling payroll and publisher payment data)
- GDPR Client Policy (when dealing with advertisers and publishers employees personal data)
- Human Resources & Personal Data Policy (when managing applicants and employee's personal data)

Handling of personal data according to these policies aims to ensure compliances with the General Data Protection Regulation (GDPR).

Information classification should take the following into account:

- Sensitive client information as prices, agreements, traffic data, and other client data.
- Legal requirements, e.g. privacy regulations (GDPR, see above)
- Owners'/shareholders' interests and
- Stock market regulations regarding financial reporting.
- Partner/subcontractor information.
- Image and trademark values.
- Loss of patent rights/abilities.
- Loss of business or business opportunities.
- Competitor interests.
- Product, design and research information.

- Security control information that can damage security safeguarding, e.g. entrance card information and passwords.

All employees must be aware of the internal policies on how to classify and handle the information they either produce themselves or come in contact with. **When information is produced, the producer must classify it with respect to the damage that could occur if disclosed, according to the list above.** In other cases the producer should label the document manually. It is mandatory to mark classification level on all produced information deemed as "confidential".

Per default unlabeled documents are regarded as "Internal".

The classification groups are: Public, Internal and Confidential. Guidelines on how to handle information belonging to the different groups is found in tables below.

1.1 Public Information

Public information is information that is available for everyone, also outside the company. Public information may be spread without restrictions. (There may, however, be restrictions following trademark and copyright protection).

How to handle Public information:

Telephone, internal and external e-mail, mail, fax, information on paper	**No restrictions**
PC on business trips	**In sight or locked in**
Mobile phone	**In sight or locked in**
USB	**In sight or locked in**
SharePoint	**No restrictions**
Printouts	**No restrictions**
Maculation	**Paper recycling**
AI usage	**No restrictions on sharing information with AI-tools or using AI transcription in e.g. Teams.**

Example of public information:

- Brochures
- Information on websites

1.2 Internal information

Internal information is information that if disclosed to an unauthorised party may lead to, in the worst case, damage to Tradedoubler.

How to handle Internal information:

Telephone	**No restrictions**
Internal E-mail	**No restrictions**
External E-mail	**Mark in the subject field**
Internal mail	**No restrictions**
External mail	**Glued envelope**
Fax	**No restrictions**
Paper document (in company or on trips)	**In sight or locked in**
PC on business trips	**In sight or locked in**
Mobile phone/PDA	**Locked with PIN-code**
USB	**In sight or locked in**
SharePoint	**The user is responsible for correct placement of information.**
Printouts	**No restrictions**
Maculation	**Paper recycling**
AI usage	**Internal information is allowed to be shared with approved AI tools. However, settings allowing external models to train on Tradedoubler data must be switched off if technically possible.** **AI transcription in e.g. Teams is allowed.**

Example of internal information:

- Technical reports
- Source code
- Assignment descriptions
- Partner/subcontractor information.
- Bidding information (small amounts)

- Non-sensitive personal data such as names and email-addresses.
- Communication with clients
- Policies available in Sharepoint/Teams
- Documents such as manuals, instructions etc available in Sharepoint/Teams etc

1.3 Confidential information

Confidential information is information that, if disclosed to an unauthorised party, may seriously harm Tradedoubler (or another person or entity, such as clients, shareholders etc.)

Confidential information shall be marked "confidential" or similar so that its status as confidential is clear to everyone who receives it. Duplication or further disclosure must be controlled.

How to handle Confidential information:

Telephone	**Secluded and with care.**
Internal E-mail	**Mark in the subject field, encrypted**
External E-mail	**Encrypted**
Internal mail	**Personally or glued envelope**
External mail	**Glued envelope**
Fax	**Watch over sending and receiving**
Paper document (in company or on trips)	**In sight or locked in**
PC on business trips	**In sight or locked in** **Hard disks encrypted**
Mobile phone/PDA	**In sight or locked in** **Encrypted** **Locked with PIN-code**
USB	**USB encrypted and in sight**
SharePoint	**Use restricted folders in Sharepoint.** **Information stored encrypted. The user is responsible for correct placement of information.**

Printouts	**Local printer, watch over while printing**
Maculation	**Paper shredder, destruction (confidential) bin**
AI usage	**Sharing confidential data with AI-tools is not allowed.** **AI transcription in e.g. Teams is not allowed.**

Example of confidential information:

- Stock market sensitive information, e.g.full Group financial reports
- Consolidated financial information on company level.
- **Sensitive Personal data**, e.g. sensitive employee data such as health or religion etc and sensitive client or publisher personal data such as trade secrets, contract commercials, bank account info etc.
- Product, design or research information in process for market launch, quality data, product settings or patent confirmations.
- Security function sensitive data, e.g. passwords and other personal access control codes, electronic keys, etc.
- Board material
- Client specific requests on limited information spreading
- Certain Policies such as the Payment Policy and the Finance Policy
